

Mumbai MuleSoft Meetup (In Collaboration with Guwahati Meetup Group)

MuleSoft Training for Salesforce Developers and
Beginners - Module 10

Date: 14th Dec Nov 2025
Time: 11 AM to 1 PM

Safe Harbour Statement

- Both the speaker and the host are organizing this meet-up in individual capacity only. We are not representing our companies here.
- This presentation is strictly for learning purposes only. Organizer/Presenter do not hold any responsibility that same solution will work for your business requirements.
- This presentation is not meant for any promotional activities.

Housekeeping

A recording of this meetup will be uploaded to events page within 24 hours.

Questions can be submitted/asked at any time in the Chat/Questions & Answers Tab.

Make it more **Interactive!!!**

Give us feedback! Rate this meetup session by filling feedback form at the end of the day.

We Love Feedbacks!!! Its Bread & Butter for Meetup.

Organizers/Speakers

Jitendra Bafna

Senior Solution Architect
EPAM Systems

Moderators

Senior Solution Architect
EPAM Systems

Abhishek Bathwal
Technical Architect
NeuraFlash

What will we cover in Training?

Module	Topic	What will we cover?	Date
Module 1	Integration & REST/HTTP Basics for Beginners & Salesforce	Integration, P2P, REST APIs, MuleSoft, Anypoint Platform	1 st Nov 2025
Module 2	API Design with RAML for Beginners & Salesforce Developers	API Design with RAML, Publishing APIs to Exchange, Resources	2 nd Nov 2025
Module 3	Anypoint Studio & Mule Basics for Beginners & Salesforce	API Implementation and Deploying API to CloudHub	8 th Nov 2025
Module 4	Core Components, DataWeave & Error Handling Essentials	Dataweave, Error Handling, Core Components	9 th Nov 2025
Module 5	Flow Control & Batch Processing for Scalable Integrations	Batch Processing, For Each, Parallel For Each	15 th Nov 2025
Module 6	HTTP Connector – Listener, Requestor & Payload Handling	HTTP Connector, OAuth Module	16 th Nov 2025
Module 7	Database Connector for CRUD Operations	Database connector to perform query and call store procedure	22 nd Nov 2025

What will we cover in Training?

Module	Topic	What will we cover?	Date
Module 8	Salesforce Connector for Seamless CRM Integration	Deep Dive into Salesforce Connector	23 rd Nov 2025
Module 9	Hosting Options & Deploying Applications to CloudHub	ClodHub 1.0 and CloudHub 2.0	6 th Dec 2025
Module 10	Managing & Securing APIs with API Manager & API Gateway	API Security, API Policies	7 th Dec 2025
Module 11	MuleSoft Demo Project	Database and Salesforce related project	13 th Dec 2025

What have we learned on Day 1?

- What is Point-To-Point Integration?
- What is Integration?
- What is REST APIs?
- What is MuleSoft and Anypoint Platform?
- Walkthrough of Anypoint Platform.
- Understanding the API Lifecycle Management.
- Design the RAML to create and fetch Account and Contacts from Salesforce.
- Published API to Anypoint Exchange.

What have we learned on Day 2?

- What is RAML?
- Reusability of RAML using Traits, Library, Security Schemes.
- OAS (Open API Specification)
- API Governance
- Overview of Anypoint Studio
- Start with API Implementation.

What have we learned on Day 3?

- What Are Connectors
- Salesforce Connector
- Implementing Salesforce System API
- Implementing Properties and Secure Properties
- Deploying MuleSoft Application to CloudHub

What have we learned on Day 4?

- Understanding API Manager and API Gateway
- Creating API Proxy
- Implementing API Auto-Discovery
- Applying Basic Authentication Policy
- Applying Client ID Enforcement Policy

What have we learned on Day 5?

- MuleSoft Batch Processing
- For Each
- Parallel For Each
- Implementing Process API

What have we learned on Day 6?

- MuleSoft Batch Processing
- Error Handling in Batch Processing
- Scatter Gather
- Orchestrating Process API

What have we learned on Day 7?

- Continue with Error handling.
- Building Experience API
- Global Error Handler
- Deploying Process API and Experience API to CloudHub

What have we learned on Day 8?

- Introduction to Dataweave
- Transform Message
- Dataweave Playground
- JSON to XML and XML to JSON
- Dataweave Arrays
- Map and Filter
- MapObject and FilterObject
- GroupBy, Pluck, Reduce
- Calling Java function using Dataweave
- External Dataweave

What have we learned on Day 9?

- Object Store
- Object Store V1 V/S Object Store V2
- Object Store Connector
- Watermarking using Object Store
- Until Successful component

What will we learn on Day 10?

- Overview of Anypoint MQ
- Anypoint MQ Publish and Subscribe
- Anypoint MQ Ack and Nack
- Anypoint MQ Exchange
- Anypoint MQ User Properties
- Anypoint MQ Circuit Breaker Pattern
- VM Queues

What is Anypoint MQ?

Anypoint MQ is MuleSoft's cloud-based message broker (part of the Anypoint Platform) used for asynchronous messaging between applications, services, and systems. It enables loose coupling, reliable message delivery, and event-driven architectures, especially in integration-heavy environments.

Anypoint MQ is a managed message queue service that allows applications to publish and consume messages without needing direct, synchronous connections.

It supports:

- Point-to-point (queues)
- Publish–subscribe (exchanges + queues)

Anypoint MQ Features

- Provides fully hosted and managed queues and message exchanges in the cloud.
- Supports large payloads, encryption, queuing, and publish/subscribe (pub/sub) paradigms.
- Enables you to easily connect to non-Mule applications by using the REST API.
- Provides Anypoint Studio access, which makes the process of leveraging your queues and message exchanges as simple as drag, drop, and configure.

Anypoint MQ Features

Unlimited messages in a queue

Anypoint MQ doesn't limit the number of messages in a queue. The size of each message in a queue is limited to 10 MB.

Long polling

Messages are read through long polling. The server holds a request open until new data is available, and then Anypoint MQ delivers a batch of messages with a single read.

Billing and charging

Billing is based on the number of messages delivered to subscribers from queues, rather than the number of queues or message exchanges you create.

Anypoint MQ Exchange and Queues

Anypoint MQ Circuit Breaker Pattern

Anypoint VM Queues

VM queues are in-memory, asynchronous messaging queues used within the same Mule application or runtime.

Key Points

-  Asynchronous communication between Mule flows
-  In-memory only (no persistence across restarts)
-  Local to the Mule runtime (not shared across workers/apps)
-  Very fast (no network or disk I/O)
-  Implemented using VM Connector (vm:publish, vm:listener)

Common Use Cases

Decoupling flows inside the same app
Background or fire-and-forget processing
Smoothing spikes in internal processing
Producer/consumer pattern within one runtime

Anypoint VM Queues

Use VM Connector when you want to:

Pass messages from one flow to another through a queueing mechanism, instead of using a `<flow-ref />` directly

Distribute work across a cluster

Communicate with different apps that are running in the same Mule domain

Perform simple queueing that does not justify the use of a full JMS broker
