What is Dataweave?

DataWeave is a language used in MuleSoft to change data from one format to another.

✨ **Simple explanation:**

Imagine you have data in one shape—like a square—and you need it to become a circle.

DataWeave is the tool that reshapes the data for you.

It can convert things like:

- JSON → XML
- XML → CSV
- CSV → JSON
- Or transform data within the same format

It's basically a **translator for data**.
